

HIGH-REFRACTIVE INDEX HARD COATING FILM

Patent Number: JP2264902
Publication date: 1990-10-29
Inventor(s): SEKI TETSUYA; others: 01
Applicant(s): TORAY IND INC
Requested Patent: JP2264902
Application Number: JP19890086540 19890405
Priority Number(s):
IPC Classification: G02B1/10 ; C08J7/04 ; C09D183/04 ; C09D183/14
EC Classification:
Equivalents: JP7069481B

Abstract

PURPOSE: To obtain the high-refractive index hard coating film which is resistant to weather and water and is not degraded in transparency by using the cured matter of a compsn. contg. a component A consisting of the multiple oxide of cerium oxide and titanium oxide and a component B consisting of an organosilicic compd. expressed by general formula and the hydrolyzate thereof.

CONSTITUTION: This hard coating film consists of the compsn. contg. the component A and the component B as its essential components. The component A consists of the multiple oxide of the cerium oxide and the titanium oxide. The weight ratio of the cerium oxide to the titanium oxide therein is ≥ 0.1 and ≤ 1.4 and the average particle size is $\geq 1\text{mmu}$ and $\leq 100\text{mmu}$. These oxides exist in the state of a sol in the film. The component B is ≥ 1 kinds selected from the group consisting of the organosilicic compd. expressed by general formula I or II and the hydrolyzate thereof. In the formulas, R and R' are 1 to 20C org. group; X is a hydrolyzable group; (a) is 0 or 1. Y is 2 to 40C org. group.
